	GLMMs	Marginal Models
REs	assume random effects that capture	no random effects
	the correlation/association between measurements	
components	distribution, systematic, link	marginal expectation,
		marginal variance, association
connection	modeling of conditional expectation	modeling of marginal expectation
	and association **together**	and association **separately**
estimation	ML-estimation	GEE (indep. of distribution)
	iterative, complex due to product of intergrals	efficient estimation
interpretation	conditional	population level
